SAFE HARBOR PLANS

The background and benefits

Background

A 401(k) plan permits employees to contribute a portion of their compensation, known as an elective deferral, to the employer's retirement plan. Deferring compensation to the plan postpones state and federal income tax on the deferrals and permits them to grow on a pre-tax basis. 401(k) plans cannot discriminate in favor of Highly Compensated Employees (HCEs)or employees who make more than a certain amount in the prior year ($150,000 in 2023). To prove that it is not discriminatory, a 401(k) plan must pass the Actual Deferral Percentage (ADP) test and the Actual Contribution Percentage (ACP) test each year.

Benefits of a safe harbor plan

One of the main benefits of a safe harbor plan is it exempts employers from performing the ADP and ACP tests annually. In addition, the employer does not need to make an extra contribution to the Non-Highly Compensated Employees (NHCEs) or refund some of the elective deferrals of HCEs, which must be done if a regular 401(k) plan fails these tests. Consequently, HCEs, subject to certain limitations, may contribute the full 401(k) plan annual dollar amount without regard to the amount any NHCE defers.

Two alternative employer contribution options

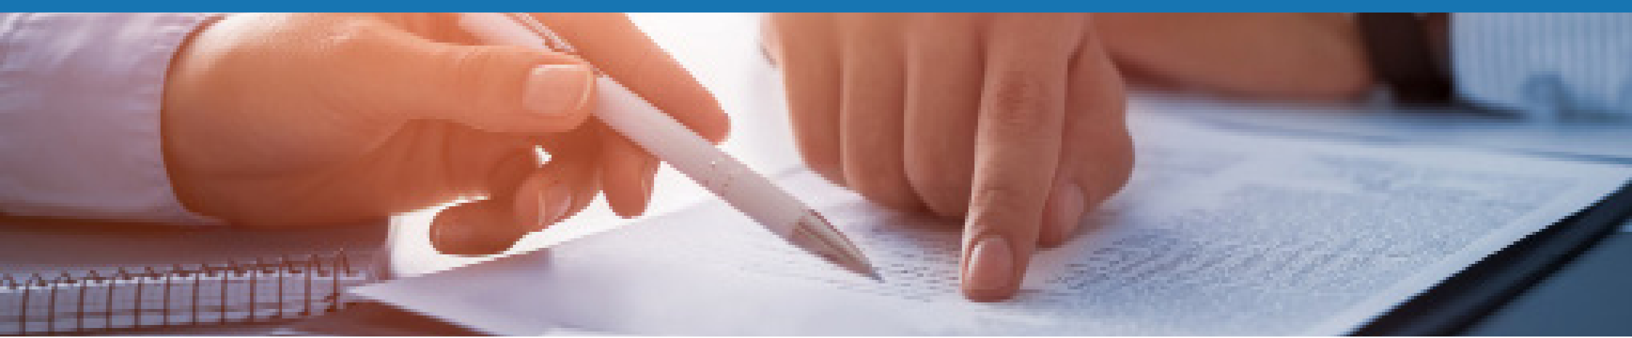
To gain this automatic compliance with the ADP and ACP tests, employers must provide a minimum contribution that is either:

- A flat, non-elective contribution of 3% of pay for all participants, or
- An employer matching contribution

These minimum contributions may include the HCE group, but it is not required. These contributions must also be 100% vested. Let's take a closer look at each option.

The 3% non-elective contribution

- Satisfies safe harbor by providing an employer-paid non-elective contribution of 3% for each eligible NHCE, regardless of whether they contribute or are employed on the last day of the plan year
- Also satisfies the minimum contribution requirements in top-heavy plans
- Can be used to count towards a minimum amount required when using a cross-tested "new comparability" allocation formula for profit sharing



Employer safe harbor matching contribution

- There are many acceptable formula options
- Must be as favorable as 100% match on the first 3% contributed, plus 50% on the next 2% contributed by employees
- If the above matching formula is chosen, an employee must defer 5% of pay to get the maximum employer matching contribution of 4%
- Alternatively, employers may make a 100% match on the first 4% of pay
- Employees in these scenarios receive nothing if they do not defer

Additional matching contributions

If the employer makes additional matching contributions over and above the safe harbor matching contribution above, the following ***additional*** requirements apply:

- **Match rate** - The matching contribution for any HCE cannot exceed the rate for an NHCE making the same level of employee deferrals.

- **Employee deferral limit** - No match can be made on employee deferral contributions greater than 6% of the participant's compensation. The match can be more than 100%, such as $2 for each $1 of deferral, but deferrals more than 6% of pay must be disregarded.

- **Additional discretionary match** - Additional employer discretionary matching contributions can also be made. Again, employee deferral contributions greater than 6% of pay may not be matched, and the overall amount of the discretionary match must be limited to 4% of pay.

Timing of deposits

Safe harbor employer matching contributions done on a per pay period basis must be deposited at least quarterly during the plan year. Specifically, the deposit should occur by the last day of the next quarter. If the safe harbor contribution is made late, this could jeopardize the safe harbor status, thus making the plan subject to compliance testing for that plan year.

If the safe harbor matching is done annually after the plan year, the total amount is due for deposit by the date the employer files its business income tax return.

Vesting and other safe harbor requirements

The safe harbor contributions described above must be 100% vested. They ***also must not*** be subject to an hour of service requirement or a last day of the plan year employment requirement. However, the plan may:

- Implement a 21 years of age and a year of service (at least 1,000 hours in 12 months) requirement
- Provide additional employer profit sharing contributions
- Not allow for distributions of the employer's safe harbor contributions during employment

Notice requirements

A safe harbor 401(k) arrangement cannot be added to an existing non-401(k) plan unless the arrangement ***will be in effect for at least 3 months*** of the plan year.

For example, suppose an employer maintains a calendar-year profit sharing plan. That employer may add a safe harbor 401(k) arrangement as late as October 1, 2023, so long as the safe harbor requirements are met from the effective date of the 401(k) arrangement to the end of that first year. The safe harbor notice would have to be given to employees no later than the effective date of the 401(k) arrangement, that is, October 1 in this example.

Qualified Automatic Contribution Arrangement (QACA)

Another option employers have is a qualified automatic contribution arrangement (QACA). It is an IRS safe harbor, meaning certain required compliance tests are deemed to pass. Participants must be auto-enrolled at a minimum of 3% and deferrals must automatically increase by 1% each year, up to a minimum of 6% and a maximum of 15%. It's important to note that in 2025, the minimum will increase to 10% for plans that are required to have automatic enrollment. Plan sponsors then must make a safe harbor contribution of either:

- a 100% matching contribution on the employee's first 1% deferred, followed by a 50% matching contribution on the employee's deferrals over 1%, but not exceeding 6% (The employer matching contribution is capped at 3.5% vs. 4% in a traditional safe harbor plan.)
- a nonelective contribution of 3% of compensation to all participants

The QACA safe harbor allows a two-year vesting schedule for the match and nonelective, specified above, instead of the immediate vesting requirement for traditional safe harbor plans. If a QACA meets the requirements of an EACA (which is typically the case), it will be eligible for the tax credit discussed below.

Tax credit for Eligible Automatic Contribution Arrangement (EACA)

Implemented by the SECURE Act, employers with no more than 100 employees earning $5,000 or more annually are eligible for a $500 tax credit each of the first three years a plan offers an EACA (including a QACA). This credit is available regardless of the plan's expenses.
